Couross			

Introduction

In the mid-1990s, the California Department of Alcohol and Drug Programs, in collaboration with the Center for Applied Research Solutions (CARS), Inc. began to work toward improving the state's prevention information system. A key component of this information system was the continuous collection, monitoring and reporting of selected community-level indicators that would serve as direct and indirect measures of alcohol and other drug use prevalence and related problems. This information system was designed to assist with state and local prevention planning and policy-making by providing useful, systematic data about prevention and treatment needs and outcomes throughout the state.

The present report is the most recent product of this ongoing effort. It differs from earlier versions in a few important ways. First, while previous reports typically summarized data for more than twenty-five indicators of health and social conditions that are theoretically linked to problem substance use, the current version is more streamlined, focusing on eight key indicators of AOD use and abuse prevalence and their direct consequences, including impacts on the criminal justice, health and alcohol and drug treatment systems. Second, the 2007 report updates information contained in earlier versions, but expands in its depth to summarize data for populations within the larger county, including age, gender, and race/ethnicity sub-groups. This expanded detail allows for more precise analyses of alcohol and drug use problems within a county population and enhances the ability to effectively target prevention and intervention strategies to community needs. Similar to previous reports, the 2007 version includes simple analytic tools to help users interpret the information presented. This includes use of population-based rates (e.g., the number of incidents relative to the total population) to make meaningful comparisons between geographic areas that differ in population size, or comparisons between differing time points. Data is presented at both the county and state level to allow county rates to be evaluated against a relative average

The overall intent of the report is to provide a simple, easy-to-use resource that helps synthesize and interpret the most relevant indicator data currently available to assess substance use problems, in an effort to optimize prevention planning and outcome measurement efforts in communities through the state. Specifically, it is designed to support the work of planners, policy-makers, and practitioners in the field in:

- Determining the incidence of alcohol and other drug use problems within county populations and sub-populations;
- Monitoring trends in problem incidence to identify emergent issues and detect changes in status over time;
- Establishing program resource levels that are appropriate to address the nature and extent of prevention and treatment needs; and,
- Documenting progress toward achieving targeted prevention objectives and outcomes.

The report contains information on several key indicators of alcohol and drug prevalence and consequences for California populations in each of the following six areas:

- Household prevalence of problem alcohol use and use of illicit drugs;
- Admissions to publicly-funded alcohol and drug treatment facilities;
- Arrests for alcohol and drug-related criminal offenses;
- Motor vehicle accidents involving drivers who had been drinking;
- Hospitalizations for alcohol and drug-related conditions; and,
- Mortality attributable to acute and chronic alcohol and drug use.

Each report contains data compiled from several sources, including a statewide, longitudinal survey of California household populations, and state data systems housing public archival records from four central agencies, including the California Department of Justice, the California Highway Patrol, the California Department of Health Services, and the Office of Statewide Health Planning and Development (OSHPD). This reliance on statewide data sources ensures that the information reported is drawn from reliable and valid measures that are routinely and uniformly collected across jurisdictions (i.e., all counties use the same data collection), allowing for comparisons over time, across counties, and between counties and the state.

Prevalence of Alcohol Use

Key Findings

- The prevalence of past month alcohol use and binge drinking for Alpine, Amador, Calaveras, Inyo, Mariposa, Mono, and Tuolumne counties in 2003 was similar to statewide rates. The percent of persons 18 years and older who reported past month alcohol use in 2003 was roughly 57 percent, and the binge drinking rate was 15 percent.
- In 2003, roughly 64 percent of males reported past month alcohol use and 50 percent of females reported past month alcohol use. Roughly 23 percent of males reported binge drinking in the past month and seven percent of females reported binge drinking in the past month.
- Roughly 70 percent of Hispanics reported past month alcohol use in 2003, and roughly 57
 percent of Whites reported past month use. These estimates should be interpreted with
 caution due to small sample sizes by race/ethnicity group.
- Alcohol use rates varied by age group. Over 60 percent of individuals between 25 and 34 drank alcohol in the past month, as did individuals between 45 and 64 years. Roughly 40 percent of individuals between 18 and 24 drank alcohol in the past month. The highest binge drinking rate was for 25 to 34 year olds at a rate of 25 percent.
- In 2003 roughly 5.5 percent of adolescents under age 18 reported binge drinking in the past month, slightly less than the statewide average of 6.3 percent.

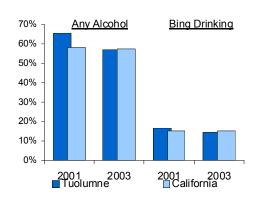

Indicators 1 & 2: Prevalence of Past Month Alcohol Use

The number and percent of persons in the population who reported any use of alcohol and number of persons who reported any binge drinking in the past thirty days.

Table/Figure 1.1

Admissions to Alcohol and Drug Treatment

Key Findings

- In 2004 there were 251 admissions to alcohol and drug treatment, a decrease from 346 admissions in 2000. The rate of admissions in 2004 was 569 admissions per 100,000, lower than the statewide average of 802 admissions per 100,000.
- Admissions for methamphetamines accounted for 46 percent of admissions in 2004, an increase from 30 percent in 2000. Admissions for alcohol use accounted for 29 percent of all admissions in 2004, a decrease from 45 percent in 2000. Admissions for marijuana use accounted for 18 percent of admissions in 2004, relatively unchanged from 2000.
- The highest proportion of admissions in 2004 was for individuals between 35 and 44 years, who accounted for 32 percent of admissions. Individuals between 25 and 34 years accounted for 27 percent of admissions in 2004, and young adults between 18 and 24 years accounted for 23 percent of admissions.
- Whites accounted for 86 percent of admissions in 2004, and Hispanics accounted for roughly seven percent. About six percent of admissions in 2004 were American Indian, who had the highest rate of admissions at 1835 admissions per 100,000.
- Admissions to alcohol and drug treatment in 2004 were fairly evenly split between males and females with males accounting for 53 percent of the total.
- Roughly 80 percent of admissions in 2004 had initiated substance use prior to the age of 21. About two-thirds of admissions in 2004 had initiated prior to age of 18.
- In 2004 about 10 percent of admissions were IV drug users.
- In 2004 almost eight percent of females admitted to alcohol and drug treatment were pregnant.
- There were four admissions to alcohol and drug treatment for youth between 10 and 17 years. Three were admitted for marijuana use, and one was admitted for alcohol use.

Indicator 3: Admissions to Alcohol and Drug Treatment

The number of admissions to publicly funded alcohol and other drug treatment facilities in California and rate of admission per 100,000 population 10 to 69 years.

Alcohol and Drug-Related Crime

Key Findings

- In 2004 there were 419 arrests for drug-related crime, a sharp increase from 158 arrests in 2000. The rate of arrest in 2004 was 949 arrests per 100,000, lower than the statewide rate of 1023 arrests per 100,000.
- Roughly 45 percent of arrests for drug-related crime in 2004 were for dangerous drugs,
 22 percent for marijuana, and about five percent for narcotics. The remaining 28 percent of arrests were for other drug violations.
- Whites accounted for 87 percent of drug-related arrests in 2004, a decrease from 93 percent in 2000. Hispanics accounted for about eight percent of the total in 2004, an increase from three percent in 2000.
- About three-fourths of arrests for drug-related crime was for individuals between 18 and 44 years. Youth between 10 and 17 years accounted for about nine percent of drugrelated arrests in 2004. The highest rate of arrest was for individuals between 25 and 34 years, who were arrested at a rate of 2318 per 100,000.
- Of the 37 arrests for drug-related crimes in 2004 for youth between 10 and 17 years, 32 arrests were male. White youth accounted for 81 percent of arrests, a decrease from 100 percent in 2000. Hispanic youth accounted for 11 percent of arrests in 2004, an increase from zero percent in 2000.
- In 2004 there were 1076 arrests for alcohol-related crimes, a substantial increase from 734 arrests in 2000. The rate of arrest in 2004 was 2438 arrests per 100,000, more than double the statewide average rate of arrest of 1087 per 100,000.
- Driving under the influence accounted for 52 percent of arrests in 2004, and drunkenness accounted for about 46 percent of arrests. Liquor law violations accounted for less than three percent of arrests.
- Whites accounted for 93 percent of alcohol-related arrests in 2004, and Hispanics accounted for about four percent.
- The highest proportion and highest rate of arrests for alcohol-related crime in 2004 were for young adults between 18 and 24 years, who accounted for 25 percent of arrests at a rate of 4991 arrests per 100,000.
- Youth between 10 and 17 years accounted for about five percent of alcohol-related arrests in 2004, and about three-fourths were male.

Indicator 4: Arrests for Drug-Related Crime

The number of felony and misdemeanor arrests for drug crimes, including dangerous drugs, narcotics, marijuana, and other drug violations and rate per 100,000 population 10 to 69 years.

Drinking and Driving

Key Findings

- In 2003 there were nine fatalities related to alcohol-involved accidents, an increase from two fatalities in 2000. The fatality rate in 2003 was 15.8 fatalities per 100,000, significantly higher than the statewide average of 4.0 per 100,000.
- There were 69 alcohol-involved collisions in 2003, an increase from 59 in 2000. Alcohol-involved collisions accounted for roughly seven percent of all collisions. There were 56 persons injured in alcohol-involved collisions in 2003, an increase from 40 in 2000.
- In 2003 there were 71 parties in alcohol-involved accidents who had been drinking and 82 percent were male. Whites accounted for 92 percent of the total, and Hispanics accounted for about six percent of the total.
- The highest proportion of parties in alcohol-involved accidents and the highest rate of involvement was for individuals between 25 and 34 years, who accounted for 25 percent of the total at a rate of 342 per 100,000. Individuals between 18 and 24 years accounted for about 17 percent of the total at a rate of 237 per 100,000.
- In 2003 there were only three underage parties less than 21 years who had been drinking in alcohol-involved accidents.
- In 2003 roughly 37 percent of youth had ridden in a car with someone who had been drinking, significantly higher than the statewide average of 20 percent.

Alcohol and Drug-Related Morbidity -

Key Findings

- In 2003 there were 47 hospitalizations due to alcohol and drug use, a decrease from 54 hospitalizations in 2000. The rate of hospitalizations in 2003 was 82 admissions per 100,000, slightly lower than the statewide average of 90 admissions per 100,000.
- There were 21 admissions due to alcohol-related causes in 2003, a decrease from 31 admissions in 2000. The hospitalization rate in 2003 was 37 admissions per 100,000, lower than the statewide average of 45 per 100,000.
- There were 26 admissions due to drug-related causes in 2003, a slight increase from 23 admissions in 2000. The rate of admissions in 2003 was 46 hospitalizations per 100,000, nearly the same as the statewide average.
- Of the 21 alcohol-related hospitalizations in 2003, 11 were for alcohol dependence syndrome, seven were for alcohol psychosis, and three were for alcohol gastritis.
- Of the 26 drug-related hospitalizations in 2003, 21 were for drug poisonings, four were for drug dependence, and one was for hallucinogen abuse.

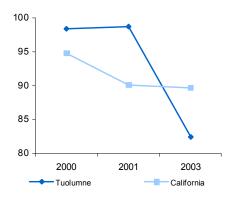

Indicator 7: Hospitalizations Due to Alcohol and Drug Use The number of hospital admissions due to alcohol and drug-related causes and rate per 100,000 population.

Alcohol and Drug-Related Mortality

Key Findings

- In 2003 there were 18 deaths due to alcohol and drug-related causes, an increase from 10 deaths in 2000. The rate of death in 2003 was 32 per 100,000, significantly higher than the statewide average of 21 deaths per 100,000.
- There were two deaths due to cirrhosis of the liver in 2003, a decrease from six deaths in 2000. The fatality rate due to cirrhosis of the liver in 2003 was 2.5 deaths per 100,000, lower than the Healthy People 2010 goal of 3.2 deaths per 100,000.
- There were 12 drug-induced deaths in 2003, a substantial increase from two deaths in 2000. The rate of drug-induced deaths in 2003 was 23.3 deaths per 100,000, significantly higher than the Healthy People 2010 goal of 1.2 deaths per 100,000.
- Of the 12 deaths due to drug use in 2003, eight were for accidental drug poisoning, and four were for intentional drug self-poisoning. Of the six deaths due to alcohol use in 2003, two were for alcohol abuse, two were for alcoholic liver disease, and two were for alcohol poisoning.
- Of the 18 deaths due to alcohol and drug use in 2003, 11 deaths were male.
- The highest proportion of deaths due to alcohol and drug use was for individuals between 45 and 54 years, who accounted for 39 percent of the total. Individuals between 35 and 44 years accounted for 22 percent of the total.
- Whites accounted for 94 percent of deaths due to alcohol and drug use in 2003, and the remaining six percent were American Indian.

Indicator 8: Deaths Due to Alcohol and Drug Use

The number of deaths due to alcohol and drug-related causes and age adjusted death rate per 100,000 population.

Table/Figure 8.1 Number of Deaths Due to Alcohol and Drug-Related Causes and Age-Adjusted Rate per 100,000 with Comparison to Statewide Rates

	2000	2001	2002	2003
Number of Deaths	10	18	17	18
Total Population	54,863	55,719	56,438	57,048
Age Adjusted Death Rate per 100,000	13.9	33.2	25.5	31.7
CALIFORNIA Rate per 100,000	19.0	19.2	20.1	20.9

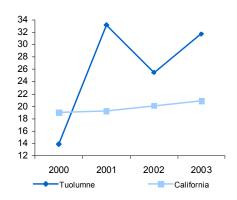

Table 8.2 Number of Deaths Due to Cirrhosis of the Liver and Rate per 100,000 with Comparison to Healthy People 2010 Objective

	2000	2001	2002	2003	
Number of Deaths	6	3	6	2	
Total Population	54,863	55,719	56,438	57,048	
Age Adjusted Death Rate per 100,000	8.4	4.5	8.9	2.5	
Healthy People 2010	3.2	3.2	3.2	3.2	

Table 8.3 Number of Drug-Induced Deaths and Rate per 100,000 with Comparison to Healthy People 2010 Objective

	2000	2001	2002	2003	
Number of Deaths	2	11	10	12	
Total Population	54,863	55,719	56,438	57,048	
Age Adjusted Death Rate per 100,000	3.0	21.4	14.0	23.3	
Healthy People 2010	1.2	1.2	1.2	1.2	

Healthy People 2010 U.S. Department of Health and Human Services

Objectives 26-2 Reduce the rate of cirrhosis deaths to 3.2 per 100,000 by the year 2010.

•••

Objectives 26-3 Reduce the rate of drug-induced deaths to 1.2 per 100,000 population by the year 2010
